This updated second edition captures the significant changes in recent years in how mental health and ill health is conceptualised. Hear the other side of the story on sexual conversion therapy! In their fervor to "fix" homosexuals, practitioners of sexual conversion therapies have often overlooked or completely dismissed the possible psychological and social side effects of such treatments. Sexual Conversion Therapy: Ethical, Clinical, and Research Perspectives works to counterbalance the clinical and ethical omissions of overzealous therapists who have focused on efficacy and outcome at the expense of their patients' self-esteem. Sexual Conversion Therapy features first-person accounts of patients and clinicians, including psychotherapists who themselves have undergone treatments ranging from psychoanalysis to religious faith healing to aversion behavior conditioning and even electroshock therapy. In addition to examining the history and ethics of conversion therapy, the book presents empirical data on current practice and recovery processes for survivors of failed conversion attempts. Sexual Conversion Therapy presents current perspectives on the harmful impact of sexual orientation interventions, including: "Cures: A Gay Man's Odyssey" "Becoming Gay" "A Psychologist's Journey Through the Ex-Gay Movement" "Therapeutic Antidotes: Gay and Bisexual Men Recover from Conversion Therapies" "I'm Your Handyman: A History of Reparative Therapies" Nearly 30 years after the American Psychiatric Association removed homosexuality from the Diagnostic and Statistical Manual of Mental Disorders, a small but dedicated group of mental health practitioners continues to diagnose and treat homosexuality as a mental illness. Sexual Conversion Therapy is an essential alternative to the bulk of published material that champions treatments that produce a handful of heterosexuals "cured" of their "illness," while inflicting emotional and psychological damage on countless gay and lesbian patients who failed to convert. This is the most stimulating, thorough, in-depth work on empathy as originated and developed by Carl Rogers within client-centred therapy and the person-centred approach that a reader will find. It provides a rigorous look at empathic understanding, with practical case illustrations throughout. 'What a 'cornucopia' of offerings are provided in this book. The quotes and extracts from Rogers are always to the point, and explorations of the concepts rich and original, each amplifying, yet not changing, Carl's meanings. This book has a unique format and style, merging tradition with innovation and whimsy. It is both intellectually stimulating and very personal. I was delighted with the wit, humour, and plays on words. When compared with the reductionistic, stereotypic depiction of Rogers' work in so many previous texts outside the Person Centred Approach community, this book is a breath of fresh air. I believe Steve has guided us with elegance and insight, wisdom and compassion, towards deeper understandings of the genius and profundity of Carl Rogers' work and his principles. While the audience for this book might best be considered to be those in training as therapists, or students using the book as a university text, it will also be most helpful for practitioners who want to review and renew a deeper

understanding of Rogers' approach. Potential clients, in seeking a safe haven for their deep explorations, may also profit greatly from this book as a guide in their search.' Gay Leah Barfield in her Foreword As founder of the person-centred approach, Carl Rogers (1902-1987) is arguably the most influential psychologist and psychotherapist of the 20th century. This book provides unique insights into his life and a clear explanation of his major theoretical ideas. This Third Edition is co-authored by Brian Thorne and Pete Sanders, leading person-centred practitioners and bestselling authors. Pete Sanders contributes a new chapter on "The Ongoing Influence of Carl Rogers", covering topics such as research, the emerging tribes in person-centred tradition, and its interaction with the medical profession. Brian Thorne draws on his experience of having known and worked with Rogers to beautifully describe the way in which Rogers worked with clients and from that, to draw out the practical implications of what is, in effect, a functional philosophy of human growth and relationships. In the twenty years since the first edition of Carl Rogers appeared, the book has continued to provide an accessible introduction for all practitioners and students of the person-centred approach. 2021 Reprint of the 1960 Edition. Facsimile of the original edition and not reproduced with Optical Recognition Software. In this essay, delivered as an address at Haverford College, Pennsylvania in 1959, Rogers discusses man's purpose and goal in life. In his therapeutic work Rogers sees clients take such directions as: away from facades; away from "oughts"; away from meeting expectations; away from pleasing others; toward being a process; toward being a complexity; toward openness to experience; toward acceptance of others; toward trust of self. Given a therapeutic climate of warmth, acceptance, and empathic understanding, the client moves from what he is not toward "being," toward becoming that which he inwardly and actually is. Quoting Kierkegaard, "to be that self which one truly is." A worthy goal indeed. This text provides coverage of the uses and abuses of the therapeutic relationship in counselling, psychology, psychotherapy and related fields. It provides a framework for integration, pluralism or deepening singularity with reference to five kinds of therapeutic relationship potentially available in every kind of counselling or psychodynamic work. The work incorporates training and supervision perspectives and examples of course design, uses in assessment and applications to group and couples as well as to organizations. Dealing with an issue of increasing complexity, the book should be of value and significance to psychotherapists, psychoanalysts, clinical and counselling psychologists and other professionals working in the field of helping human relationships such as doctors, social workers, teachers and counsellors. The late Carl Rogers, founder of the humanistic psychology movement, revolutionized psychotherapy with his concept of "client-centered therapy." His influence has spanned decades, but that influence has become so much a part of mainstream psychology that the ingenious nature of his work has almost been forgotten. A new introduction by Peter Kramer sheds light on the significance of Dr. Rogers's work today. New discoveries in the field of psychopharmacology, especially that of the antidepressant Prozac, have spawned a quick-fix drug revolution that has obscured the psychotherapeutic relationship. As the pendulum slowly swings back toward an appreciation of the therapeutic encounter, Dr. Rogers's "client-centered therapy" becomes particularly timely and important. 'Not only is this the first key text on person-centred counselling psychology, but one of the best introductions to the approach. Gillon combines an in-depth understanding of the person-centred field with a highly accessible writing style to produce a book that will be of enormous value to anyone wanting to practice person-centred therapy. Essential reading for trainee and practising counselling psychologists with an interest in the person-centred approach and highly recommended for counsellors and psychotherapists of all orientations' - Mick Cooper, Professor of Counselling, Counselling Unit, University of Strathclyde Person-Centred Counselling Psychology: An Introduction is an introduction to the philosophy, theory and practice of the person-centred approach. Focusing on the psychological underpinnings of the approach, Ewan Gillon describes the theory of personality on which it is based and the nature of the therapeutic which is characterised by o unconditional positive regard o empathy o congruence. The book shows

how the person-centred approach relates to others within counselling psychology and to contemporary practices in mental health generally. It also gives guidance to readers on the approach's research tradition as well as considering key issues for those wishing to train and work as a person-centred practitioner. As such, it is designed to be an applied, accessible text, providing a dialogue between the psychological basis of person-centred therapy and its application within the real world. As well as psychology students, it will be of interest to those from other disciplines, counselling trainees, those within the caring professions, and person-centred therapists from a non-psychological background. Ewan Gillon is Director of The Edinburgh Psychology Centre and Lecturer in Counselling Psychology at Glasgow Caledonian University. 'In this scholarly book, Thorne and Lambers have gathered together significant contributions to the advancement of person-centred theory and practice from leading exponents of the approach in Austria, Belgium, Germany, The Netherlands, Norway and the United Kingdom.... I found the book both stimulating and challenging. The insight it offers into working with "difficult" clients is invaluable and the sections on theory stretched me in my understanding of the approach. I strongly recommend it to anyone from within or without the person-centred tradition who wants to achieve a real understanding of the approach "post Rogers" and get to grips with the vibrancy and vitality of person-centred thought in Europe' - Counselling, The Journal of 'The discussion of empathy, acceptance and congruence is central and should be required reading for all trainees working to understand the richness of these core concepts... outstanding' - Counselling, The Journal of the British Association for Counselling Widely regarded as a classic text, Person-Centred Counselling in Action has now been revised and updated to take account of recent developments in theory and practice. This bestselling exploration of one of the most popular approaches in counselling today is invaluable for students and experienced counsellors alike. The authors explore the philosophical base to the approach originated by Carl Rogers and stress the considerable persona Person-Centred Therapy in Focus provides a much-needed exploration of the criticisms levelled against one of the most widespread forms of therapeutic practice. Characterized by its critics as theoretically 'light', culturally biased and limited in application, until now the person-centred approach has had comparatively little written in its defence. Paul Wilkins provides a rigorous and systematic response to the critics, drawing not only on the work of Carl Rogers, but also of those central to more recent developments in theory and practice (including Goff Barrett-Lennard, Dave Mearns, Jerold Bozarth, Germain Leitauer and Brian Thorne). It traces the epistemological foundations of person-centred therapy and places the approach in its social and political context. Examining the central tenets of the approach, each chapter sets out concisely the criticisms and then counters these with arguments from the person-centred perspective. Chapters cover debates in relation to: - the model of the person - self-actualization - the core conditions - non-directivity - resistance to psychopathology - reflection, and - boundary issues. Person-Centred Therapy in Focus fulfills two important purposes: firstly to answer the criticisms of those who have attacked the person-centred approach and secondly to cultivate a greater critical awareness and understanding within the approach itself. As such it makes a significant contribution to the person-centred literature and provides an excellent resource for use in training. In this ground-breaking and highly controversial book, Jeffrey Moussaieff Masson attacks the very foundations of modern psychotherapy from Freud to Jung, from Fritz Perls to Carl Rodgers. With passion and clarity, Against Therapy addresses the profession's core weaknesses, contending that, since therapy's aim is to change people, and this is achieved according to therapist's own notions and prejudices, the psychological process is necessarily corrupt. With a foreword by the eminent British psychologist Dorothy Rowe, this cogent and convincing book has shattering implications. Modelled on Three Psychologies: Perspectives from Freud, Skinner and Rogers, this book provides an introduction to an overview of the main therapeutic approaches used in psychotherapy and counselling today. This book explores, in depth, the link between modern psychiatric practice and the person-centred approach. It promotes an open dialogue between traditional rivals - counsellors and psychiatrists within the NHS - to assist greater understanding and improve practice. Easy to read and comprehend, it explains complex issues in a clear and accessible manner. The author is a full-time psychiatrist and qualified counsellor who offers a unique perspective drawing on personal experience. Humanising Psychiatry and Mental Health Care will be of significant interest and help to all mental health professionals including psychiatrists and psychiatric nurses, social care workers, occupational therapists, psychologists,

person-centred counsellors and therapists. Health and social care policy makers and shapers, including patient groups, will also find it helpful and informative. Lessons from the personal experience and reflections of a therapist. The difficulty and cost of training psychotherapists properly is well known. It is far easier to provide a series of classes while ignoring the more challenging personal components of training. Despite the fact that the therapist's self-insight, emotional maturity, and calm centeredness are critical for successful psychotherapy, rote knowledge and technical skills are the focus of most training programs. As a result, the therapist's personal growth is either marginalized or ignored. The Making of a Therapist counters this trend by offering graduate students and beginning therapists a personal account of this important inner journey. Cozolino provides a unique look inside the mind and heart of an experienced therapist. Readers will find an exciting and privileged window into the experience of the therapist who, like themselves, is just starting out. In addition, The Making of a Therapist contains the practical advice, common-sense wisdom, and self-disclosure that practicing professionals have found to be the most helpful during their own training. The first part of the book, 'Getting Through Your First Sessions,' takes readers through the often-perilous days and weeks of conducting initial sessions with real clients. Cozolino addresses such basic concerns as: Do I need to be completely healthy myself before I can help others? What do I do if someone comes to me with an issue or problem I can't handle? What should I do if I have trouble listening to my clients? What if a client scares me? The second section of the book, 'Getting to Know Your Clients,' delves into the routine of therapy and the subsequent stages in which you continue to work with clients and help them. In this context, Cozolino presents the notion of the 'good enough' therapist, one who can surrender to his or her own imperfections while still guiding the therapeutic relationship to a positive outcome. The final section, 'Getting to Know Yourself,' goes to the core of the therapist's relation to him- or herself, addressing such issues as: How to turn your weaknesses into strengths, and how to deal with the complicated issues of pathological caretaking, countertransference, and self-care. Both an excellent introduction to the field as well as a valuable refresher for the experienced clinician, The Making of a Therapist offers readers the tools and insight that make the journey of becoming a therapist a rich and rewarding experience. 'Jenkins' book makes the law relevant, understandable and manageable to counsellors and psychotherapists. It makes clear, reassuring and essential reading for therapists in training as well as those in practice. [All] counsellors and psychotherapists need to be up to speed with the law and with how it relates to their work. This book is more than timely with the impending introduction of regulation, and the fact that increasingly the work of counsellors and psychotherapists is being subjected to legal scrutiny' - Healthcare Counselling and Psychotherapy Journal Counselling, Psychotherapy and the Law is the long-awaited Second Edition of Peter Jenkins' comprehensive introduction to legal issues in relation to counselling and psychotherapy in the UK. This text has been fully updated to include coverage of the key developments in the law that have had major impact on therapists' practice with regard to data protection and the management of confidentiality. The book breaks new ground by exploring in detail the relationship of ethics to the law and providing a framework for relating the BACP Ethical Framework to legal decision-making. Key features of this new edition include: " extensive use of case studies. These bring legal examples to life and give a human dimension to powerful ethical dilemmas such as seeking agreement to end medical treatment, or client's gaining access to their own confidential records " key points, which provide quick summaries of complex material and reference guides for professional practice " the multiple points of crossover and intersection of law and therapy. These are identified and explored, ranging from the use of narrative theory, to the provision of pre-trial therapy for abused children, to the role of the therapist as expert witness. This new edition provides clarity and reassurance for practitioners at all levels about the exact nature of their responsibilities, and how these can best be managed, in order to enable them to comply with the law and focus on their therapeutic work with clients. Counselling, Psychotherapy and the Law, Second Edition provides an essential source of reference in a single volume, making a fascinating and complex topic understandable and bringing it to life. Peter Jenkins, formerly a member of the BACP Professional Conduct Committee and currently a member of the Ethics Committee of the UKCP, has been described by Counselling at Work as 'probably the foremost authority on legal issues in counselling'. He is Co-Director of the Counselling and Psychotherapy Directorate at the University of Salford. More reviews:

Despite requiring real concentration, this is an essential read for counsellors and psychotherapists irrespective of background and theoretical orientation. Trainers, supervisors and agency coordinators especially would benefit from the up to date material contained here' - Therapy Today

Peter Jenkins has consulted widely over the content of this book, both within the psychological therapies field and with legal eagles. [His] use of clear flow diagrams and comparison boxes enable the reader to identify the similarities and differences between professional and moral/ethical debates. It is a thoroughly researched and accessible text' - Association for University and College Counselling Journal

a comprehensive overview of a rapidly evolving field. This book represents a helpful addition to practitioners' bookshelves as a reference work, but also a beneficial read to stimulate thoughtful responses to practical dilemmas. It provides a good support to both therapeutic and supervision practices across the spectrum of experience and theoretical models' - The Psychotherapist

The person-centred approach is one of the most popular, enduring and respected approaches to psychotherapy and counselling. Person-Centred Therapy returns to its original formulations to define it as radically different from other self-oriented therapies. Keith Tudor and Mike Worrall draw on a wealth of experience as practitioners, a deep knowledge of the approach and its history, and a broad and inclusive awareness of other approaches. This significant contribution to the advancement of person-centred therapy: Examines the roots of person-centred thinking in existential, phenomenological and organismic philosophy. Locates the approach in the context of other approaches to psychotherapy and counselling. Shows how recent research in areas such as neuroscience support the philosophical premises of person-centred therapy. Challenges person-centred therapists to examine their practice in the light of the history and philosophical principles of the approach. Person-Centred Therapy offers new and exciting perspectives on the process and practice of therapy, and will encourage person-centred practitioners to think about their work in deeper and more sophisticated ways. Using real cases, narratives, and biographical material, this text examines issues related to the mental health intersect with race and ethnicity. It draws on the experiences of ethnic minority therapists. Person-centred therapy, based on the ideas of the eminent psychotherapist Carl Rogers, is widely practised in the UK and throughout the world. It has applications in health and social care, the voluntary sector and is increasingly relevant to work with people who are severely mentally and emotionally distressed. This book offers a comprehensive overview and presents the core theories, advances and practices of the approach in a concise, accessible form. Person-Centred Therapy: 100 Key Points begins with a consideration of the principles and philosophy underpinning person-centred therapy before moving to a comprehensive discussion of the classic theory upon which practice is based. Further areas of discussion include: the model of the person, including the origins of mental and emotional distress the process of constructive change a review of revisions and advances in person-centred theory child development, styles of processing and configurations of self the quality of presence and working at relational depth. Finally criticisms of the approach are addressed and rebutted, leading readers to the wider person-centred literature. As such this book will be particularly useful to students and scholars of person-centred therapy, as well as anyone who wants to know more about one of the major therapeutic modalities. Drawing on practical experience, the contributors to this book provide information on the contemporary experience of living as a lesbian, gay or bisexual person. They provide an overview of lesbian, gay and bisexual psychology and propose a model of "gay affirmative therapy" This text provides a comprehensive overview of a variety of major counseling theories and focuses on the integration of different theoretical models. Appropriate for advanced undergraduates and graduate students, it offers a detailed description of the philosophical basis for each theory, along with historical context and a biography of the founder. Each chapter follows a similar format and explores the main features of the theory, including its approach to and ideas on personality development, human nature, the role of environment, the change process in therapy, and contributions and limitations to the mental health field. Theory-specific information on diagnosis, psychopharmacology, multicultural issues, spirituality, and gender issues is also discussed. These features will provide students with a deeper and more complete understanding of counseling theory than is available in any single resource and allow them to easily bridge classroom study to their future practice. This second edition of the text has been completely updated and includes more case examples, as well as a new chapter on Constructivist approaches. An online instructor's

manual with student resources is available and offers material to enhance the pedagogical features of the text. Play Therapy Today brings together the work of renowned practitioners and academics currently working and researching in therapeutic play and play therapy, and presents a range of ground-breaking methods for practising with groups, individuals, and parents and carers. Providing an overview of new or revitalised topics in play therapy, each chapter presents the relevant theoretical underpinnings and principles of practice, a guide to implementing the method and case study vignettes of the approach in practice. The three sections include chapters on: the Therapeutic Touchstone model and the development of the therapeutic relationship, an overview of the use of individual play therapy techniques with children in a hospital setting, and an overview of Yassenik and Gardner's Play Therapy Dimensions Model with an in-depth exploration of the dimension of consciousness from both a theoretical and practical, play-based orientation. Jennings' Embodiment-Project-Role model and its implementation in group work, the practical use of puppets in educational and therapeutic settings, the therapeutic value of working with groups in the outdoors, and the use of play in groups for children with a variety of sensory, intellectual and physical disabilities. Stagnitti's adaptation of the 'Learn to Play' programme for parent/carer use, Group Theraplay with peer groups and parent/child dyads and how a neurosequential approach supports case conceptualization and play therapy practice with families. The book provides practitioners with up-to-date, effective and practical techniques that they can put into immediate use in their clinical work with children and their families. It is an important resource for trainee, newly qualified and seasoned play therapists, play therapy supervisors and trainers. It will also be of interest to social workers, teachers, psychologists, child psychotherapists and other health professionals. Learn to deepen your knowledge and skills in Urine Therapy, masterfully teach, guide other people's UT process and become a successful Urine Therapy teacher or therapist. In this collection of powerfully illuminating and often poignant essays, contributors candidly discuss the impact of central life crises and identity concerns on their work as therapists. With chapters focusing on identity concerns associated with the body-self (body size, ethnicity, sexual orientation, and age), urgent life crises, and defining life circumstances, The Therapist as a Person exemplifies the myriad ways in which the therapist's subjectivity shapes his or her interaction with patients. Included in the collection are life events rarely if ever dealt with in the literature: the death of family members, late pregnancy loss, divorce, the failure of the therapist's own therapy, infertility and childlessness, the decision to adopt a child, and the parenting of a profoundly deaf child. From a founding member of the coaching movement comes a detailed guide to mastering one of a coach's toughest skills: thoughtfully reflecting clients' words and expressions back to them so they see themselves and their world through new eyes. "Coaches rely far too much on asking open-ended questions," says Marcia Reynolds. But questions only seek answers—inquiry provides insight. When, instead of just questions, clients hear their thoughts, opinions, and beliefs spoken by someone else, it prompts them to critically consider how their thinking affects their goals. Reynolds cites the latest brain science to show why reflective inquiry works and provides techniques, tips, and structures for creating breakthrough conversations. This book will free coaches from the cult of asking the magical question by offering five essential practices of reflective inquiry: focus on the person, not the problem; summarize what is heard and expressed; identify underlying beliefs and assumptions; unwrap the desired outcome; and articulate insights and commitments. Using these practices, combined with a respectful and caring presence, helps create a space where clients feel safe, seen, and valued for who they are. Coaches become change agents who actively recharge the human spirit. And clients naturally dive deeper and develop personalized solutions that may surprise even the coach. In this book Jerold Bozarth presents a collection of twenty revised papers and new writings on person-centred therapy representing over 40 years' work as an innovator and theoretician. Person-centred therapy, rooted in the experience and ideas of the eminent psychotherapist Carl Rogers, is widely practised in the UK and throughout the world. It has applications in health and social care, the voluntary sector and is relevant to work with people who are severely mentally and emotionally distressed. As well as being a valuable sourcebook and offering a comprehensive overview, this edition includes updated references and a new section on recent developments and advances. The book begins with a consideration of the principles and philosophy underpinning person-centred therapy before moving to a comprehensive discussion of the classical theory upon

which practice is based. Further areas of discussion include: The model of the person, including the origins of mental and emotional distress The process of constructive change A review of revisions of and additions to person-centred theory Child development, styles of processing and configurations of self The quality of presence and working at relational depth Criticisms of the approach are addressed and rebutted and the application of theory to practice is discussed. The new final section is concerned with advances and developments in theory and practice including: Counselling for Depression The Social Dimension to Person-Centred Therapy Person-Centred Practice with People experiencing Severe and Enduring Distress and at the 'Difficult Edge' A Review of Research Throughout the book, attention is drawn to the wider person-centred literature to which it is a valuable key. Person-Centred Therapy will be of particular use to students, scholars and practitioners of person-centred therapy as well as to anyone who wants to know more about one of the major psychotherapeutic modalities. Focusing on counselling bereaved clients and those with terminal illness, this book contains case studies, reflective thoughts and feelings of both the client and counsellor. Boxed key points and references to person-centred theory aid easy comprehension. Author Jerome Blackman confronts the universal, common, unusual, and rare problems that arise for practitioners during psychotherapeutic treatment. A positive bridge-building book, aiming to bring together two helping cultures, those of the person-centred therapist and the psychiatrist, that might otherwise see each other as hostile. With diploma and masters students in sight it should both widen placement possibilities, and encourage therapists to work in multi-disciplinary teams with This is the first book to focus on commonly occurring client issues and explore how to work with them from a person-centred perspective. Extensive case studies translate person-centred theory into effective practice, enabling therapists to work successfully with clients presenting a variety of different problems including: - Post Traumatic Stress - Depression - Panic and Anxiety - Drug and Alcohol Issues - Eating difficulties - Self harm - Childhood Sexual Abuse Each chapter covers the origin and meaning of the difficulty, the person-centred therapeutic approach and process, and the outcomes. Drawing from a combined 50 years of experience in the field, Paul Wilkins and Janet Tolan bring together leading person-centred therapists to address how and why each problem can be eased by means of working with the person. This book should be on the desk of every counselling and psychotherapy trainee, and is recommended reading for other practitioners of health and social care working with these client groups. Leaving Home presents a method of family therapy at the stage when children are leaving home. It includes a special classification of young people with problems, and tackles family orientation, the therapist support system, the first interview, apathy, troublemaking, a heroin problem, a chronic case, and resolved and unresolved issues. Visit www.haley-therapies.com for additional resources by Jay Haley, including live videos of the pioneering therapist in action. The ethics book no psychology student or professional should be without Thoroughly updated and expanded to include recent research findings, landmark legal decisions, the Hoffman Investigation Report, and changes in the ethical guidelines of the American Psychological Association and the Canadian Psychological Association, the new 5th edition of Ethics in Psychotherapy and Counseling covers the latest developments in ethical thinking, standards, and practice. You'll learn how to strengthen your ethical awareness, judgement, and decision-making. Distinguished Emeritus Professor Don Meichenbaum described the 5th edition as 'a MUST READ book for both beginning and seasoned clinicians' and Professor David H. Barlow wrote, 'A stunningly good book. . . . If there is only one book you buy on ethics, this is the one.' Covers the many changes and challenges brought about by new technology, EHRs, videoconferencing, and texting, as well as practicing across state and provincial borders Discusses moral distress and moral courage Includes 5 chapters on different aspects of critical thinking about ethical challenges, including a chapter on 'Ethics Placebos, Cons, and Creative Cheating: A User's Guide' Deals with complex issue of culture, race, religion, sexual identity, sexual orientation, and politics Provides steps to strengthen ethics in organizations Offers guidance on responding to ethics, licensing, and malpractice complaints—not to imply that you'll need to after reading this book! Keeps the focus on practical, creative approaches to the responsibilities, challenges, and opportunities encountered by therapists and counselors in their work. What would psychology look like if we took the planet seriously? This is the question addressed by ecopsychologists, who argue that we should trust our experience and understand that the earth is not composed of dead

matter but is a living system of which we are a part. Ecopsychologists are more interested in our relations with the earth than our relations with each other. They do not find much inspiration in conventional psychology, and generally have little to say about counselling and psychotherapy. Meanwhile, counsellors continue to work as though counselling is essentially an exercise carried out in private between two individuals, one of whom is undertaking to help the other deal with a personal problem. Surely, as Bernie Neville puts it, 'Our efforts should be spent on saving the planet. After that we can worry about whether we are happy or not.' In discussions of the human predicament these two points of view rarely meet, but here they are brought together lucidly and coherently. Bernie Neville takes both personal counselling and the planet seriously. He gets his inspiration from philosophers and psychologists who have puzzled over our relationship to the planet and each other. Arne Naess, Alfred North Whitehead, Jean Gebser, Carl Rogers and Carl Jung have had a significant influence on his ideas. These five thinkers all have enthusiastic followers, but they don't talk to each other very much. The Life of Things may be unique in fitting all five between the same covers. It is unique also in its achievement of dealing with these rich, diverse and complex ideas with eloquence and clarity. Sommerbeck provides a straightforward appreciation of the problems and offers solutions to working with clients with severe mental health problems. The book examines situations when the therapist feels outside their comfort zone and how to deal with them. In essence, it covers the areas that many academic courses don't teach. The Person of the Therapist Training Model presents a model that prepares therapists to make active and purposeful use of who they are, personally and professionally, in all aspects of the therapeutic process—relationship, assessment and intervention. The authors take a process that seems vague and elusive, the self-of-the-therapist work, and provide a step-by-step description of how to conceptualize, structure, and implement a training program designed to facilitate the creation of effective therapists, who are skilled at using their whole selves in their encounters with clients. This book looks to make conscious and planned use of a therapist's race, gender, culture, values, life experience, and in particular, personal vulnerabilities and struggles in how he or she relates and works with clients. This evidence-supported resource is ideal for clinicians, supervisors, and training programs.
